

How Accurate Data Reporting & Analytics

IMPACT SECURITY IN HEALTHCARE FACILITIES

omnigo

Security professionals are responsible for a number of duties that ensure the safety and welfare of healthcare environments. From routine patrols and maintenance checks to managing critical incidents, each task is documented by officers and funneled into a periodic reporting cadence.

The information contained in these daily, weekly, and/or monthly reports serves several purposes.

Investigative support for events pertaining to theft, assault, and other crimes

Verification of consistent patrols for equipment functionality (fire extinguishers, AEDs, etc.), select maintenance protocols (exterior lighting, door locks, etc.), and safety precautions (elimination of trip and fall hazards, etc.)

Daily events tracking to identify trends and areas in and around the facility that pose potential security risks

Analytics compilation for supervisory, organizational, and regulatory reports

Without appropriate data reporting, gaps may exist in planning, procedures, staffing, equipment and supplies, or external support coordination that can impact security team effectiveness during routine or emergency activities.

Reporting accuracy also affects how the data helps security supervisors petition facility decision makers for department resources **to address potential risks or close gaps, including:**

Additional staff

Training

Equipment

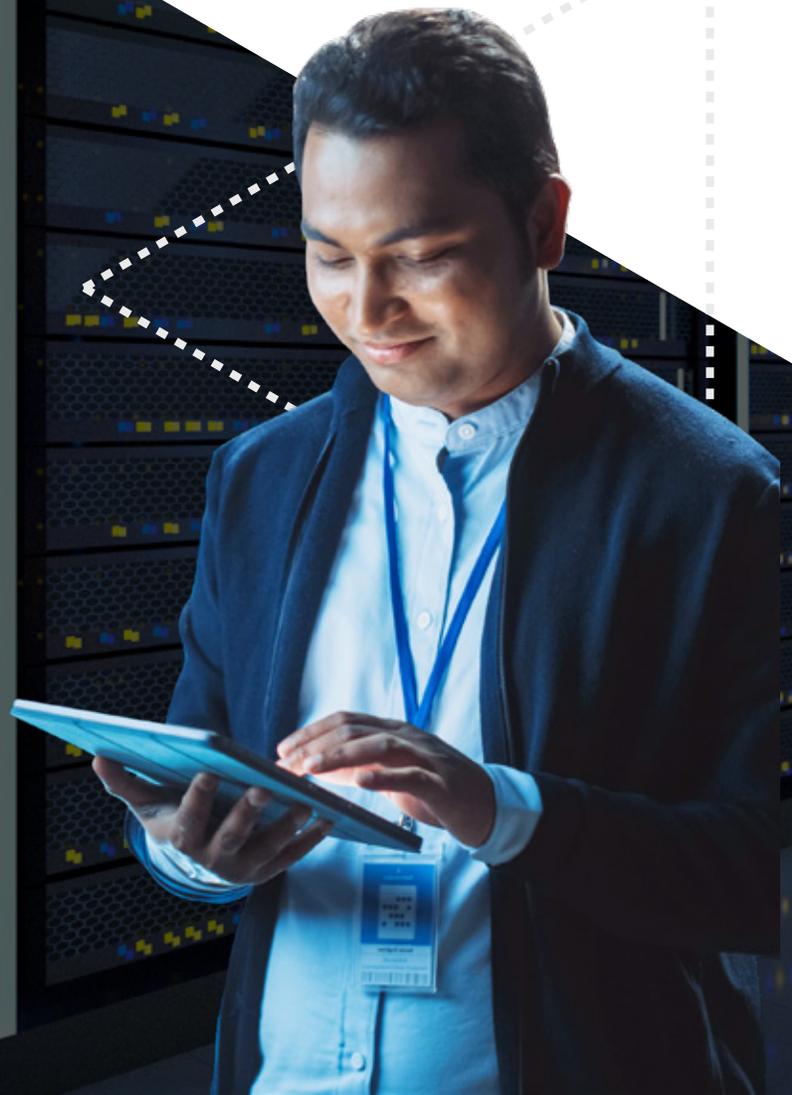

Technology

Budget increases

Detailed reports based upon trackable, current data provide valuable context for decision makers to understand and prioritize security initiatives. Likewise, reliable data helps security supervisors. They can quickly frame department activity and demonstrate how requested resources and assets will help improve facility protection.

Given everything it influences, accurate reporting is essential at all levels. However, not all reporting methods are conducive to efficiency or precision. Most are time consuming, some create potential miscommunication between personnel and shifts, and still others are incompatible across software platforms.

ENHANCE SAFETY OF Healthcare Facilities with Omnigo Report Exec

The end-to-end Omnigo Report Exec software solution addresses — and overcomes — reporting challenges security directors and teams in healthcare environments routinely face.

The single integrated platform stores every file, report, and message in one secure, searchable database. Audit trails for actions performed in the software add another layer of efficiency that allow security teams to operate cohesively and remain responsive to facility safety needs.

Report Exec is easy to configure, customize, and learn — providing a breadth of operational capabilities that help security professionals meet the demands of the department.

Time-saving data entry with automatic known information population, quick-key codes, and drop-down menus

Streamlined communication through built-in features and customizable user roles and permissions that ensure all parties have the information they need to perform their duties

Automated reporting that includes customizable statistical reporting filters, auto-delivery schedules, and notifications linked to specified incident types or locations to alert necessary department personnel

Accurate data collection using a tree dictionary-based system for statistical reporting consistently presented in your language throughout the organization

Informed resource allocation and management with data dashboards, customizable reporting, statistical analyses, and easy data compilation for budget request justifications and accountability measures

STREAMLINE DAY-TO-DAY

Security Operations and Add Value to Reporting

Report Exec is a trusted solution for accountable department management on the whole, but the platform also adds efficiencies to day-to-day operations that can add even more value to report data.

Security officers can depend on just one centralized system for:

Improved in-field reporting that simplifies report creation and customization to meet operational standards

Consolidated information sharing that ensures security officers and support personnel are apprised of critical BOLO information, dispatch call details, etc.

Logical workflows during fast-moving events to capture and distribute emergency details and documentation, and create high-speed call, emails, text, and TTD notifications for specific healthcare facility personnel

Accurate, Automated Regulatory Reporting

Certain sentinel events in healthcare facilities trigger mandatory reporting to the Joint Commission, OSHA, or other regulatory agencies. Timeliness and accuracy are paramount, making Report Exec ideal for security directors and supervisors.

Supervisors can leverage Report Exec to proactively understand and manage the department with:

- **Shift tracking** that summarizes activities and events

- **Easy employee scheduling** using an interface that prepopulates availability information

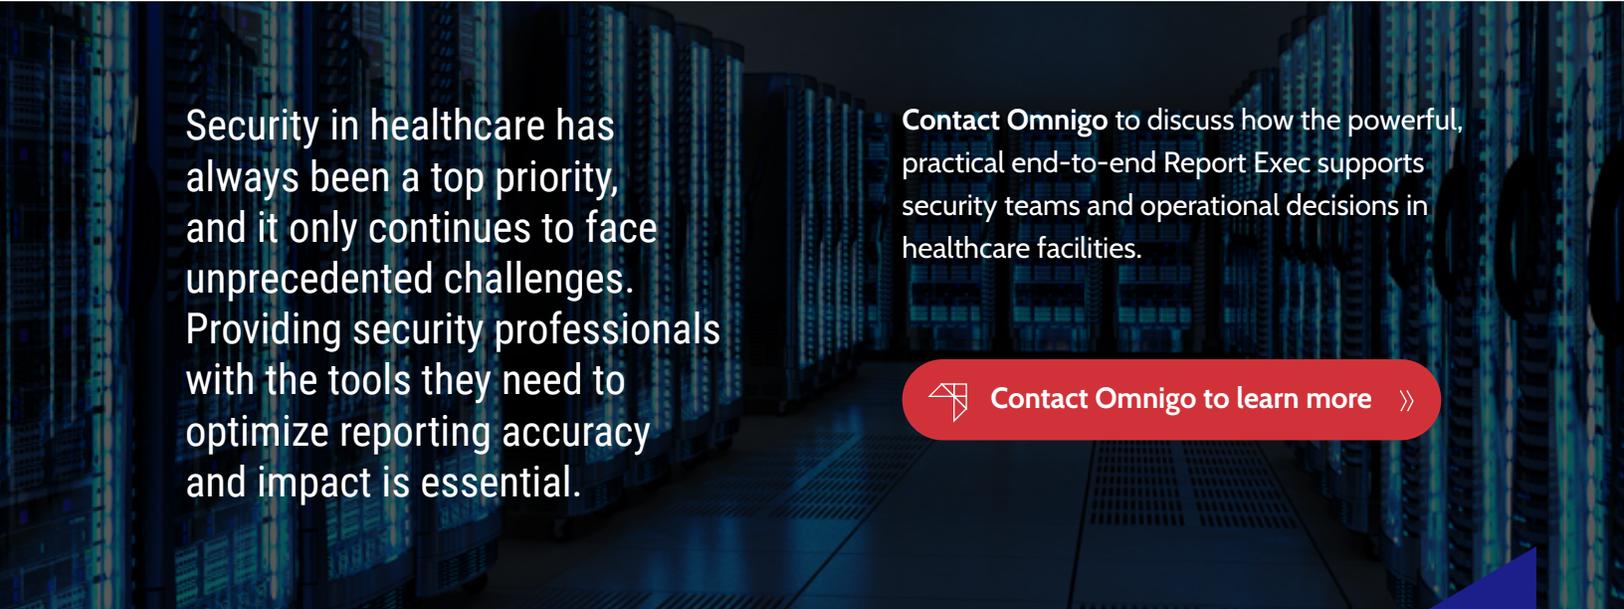

- **Simplified administrative reporting** that makes often-used data compilation readily accessible

- **Multifunctional auditing** that reveals weaknesses and redundancies in reports and user activities, and insights into messages, errors, and data usage

- **Workplace accident and injury management** to document incidents and actions taken to prevent recurrence and collect information for OSHA reporting

- **Certification recordkeeping** to ensure training is up to date and security officers remain in compliance

- **Incident-related trend identification** to connect commonalities in events and potentially provide insights into perpetrators of crimes

Security in healthcare has always been a top priority, and it only continues to face unprecedented challenges. Providing security professionals with the tools they need to optimize reporting accuracy and impact is essential.
