JAIL MANAGEMENT

SOFTWARE SYSTEM

omnigo

KNOW EVERY DETAIL, MANAGE EVERY STEP

Track every aspect of an inmate's profile—from booking and housing to diet preferences, assessments, and release plans. Centralized data streamlines operations, ensuring accurate records, and efficient management across every stage of the inmate lifecycle.

## FAST, ACCURATE INTAKE - RIGHT FROM THE START

Speed up the booking process while reducing costly mistakes. Our intake system captures critical inmate details efficiently, eliminating errors caused by paper-based processes. With real-time data entry and integrated workflows, staff can ensure every booking is accurate, compliant, and secure—right from day one.

PRECISION MEDICATION TRACKING FOR SAFER INMATE CARE

Ensure accurate, real-time tracking of medications, including expiration dates, dosages, and dispensing details. Our jail management software helps staff maintain compliance with healthcare standards while enhancing inmate safety and streamlining medication administration.
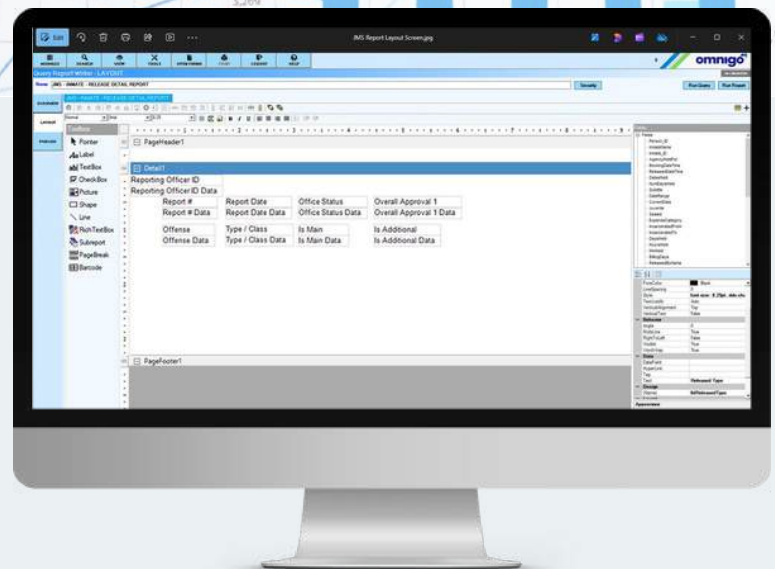

SIMPLIFIED COMMISSARY MANAGEMENT

Take control of jail commissary operations with an all-in-one management system. Track inventory by category, quantity, price, and expiration date while generating detailed expense reports. Streamline inmate purchases, maintain accurate stock levels, and ensure smooth, efficient operations.

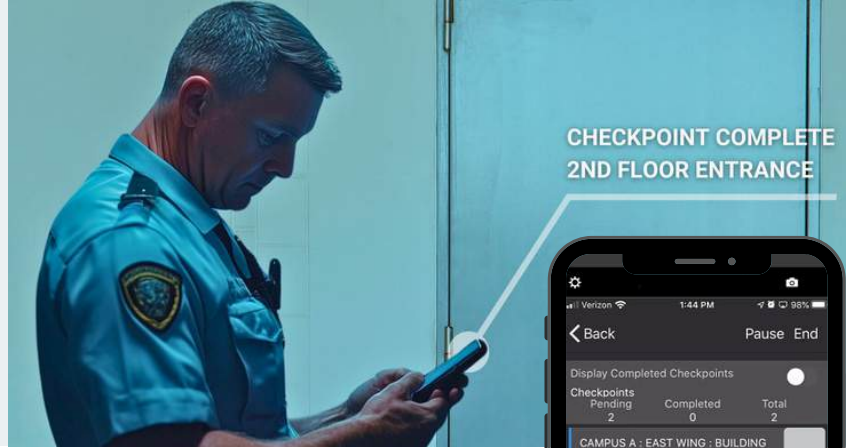

REPORT DATA YOUR WAY

Gain complete control over your data with powerful, flexible query and reporting tools. Let the system generate queries for you or customize them with precision—select fields, apply filters, and perform calculations with ease. Fully customizable report layouts ensure you can present and distribute information in the most meaningful way for your organization.

INCREASE GUARD AND INMATE SAFETY

Proof of presence guard patrol software system ensures safety and compliance throughout your facilities by automating the execution and verification of scheduled guard tours.

CHECKPOINT COMPLETE 2ND FLOOR ENTRANCE

### EASILY CREATE AND SCHEDULE GUARD TOURS
Dropdown lists and drag-and-drop selectors allow quick creation of guard tours that can cover an entire building or a single cell. Tours can be scheduled to repeat daily/weekly/monthly, end after a number of occurrences, or stop on a specific date.

ASSIGN DYNAMIC CHECKLISTS TO CHECK POINTS
Easily create and assign a dynamic form or checklist of required activities to be performed and verified at each check point. Verification activities can include logging a response using radio buttons or a dropdown picklist, or uploading digital media.

AUDIT ACCOUNTABILITY AND LIMIT RISK OF LIABILITY
Automated notifications alert supervisors to violations such as tours not starting on time, ending on time, or stopped before completion. Flexible reporting allows audit of any activity performed on a tour, along with date, time, and location vertification.

MOBILE APP

Officers use a mobile app to report incidents and upload digital evidence in areas with or without network connectivity.

EFFICIENTLY INVENTORY AND MANAGE ASSETS

Protect against the financial impact of lost assets, overspending, and compliance infractions. Speed the intake, issuance, inventorying, and auditing of items with a robust management and reporting quartermaster software system.

EASILY ADD ASSETS TO INVENTORY
Bring new assets into inventory quickly and easily by scanning a barcode you create or one existing on supplier packaging. With each scan, our Quartermaster software instantly shows the current quantity on hand, storage location, and future orders.

SPEED THE ISSUING OF ASSETS
Speed the issuing of assets by kitting smaller items with a larger one. Individual items such as a two-way radio, leather belt holster, and speaker mic can be kitted into a single COMMS kit number without losing the ability to cost and maintain each item.

PROACTIVELY MANAGE STATUS
Proactively manage the status of assets by creating automated alerts that signal important events such as expiration dates past, total number of uses exceeded, or low stock levels met. Budgetary alerts can notify when spending exceeds a set maximum.
